

COMPOUNDS AND METHODS FOR MODULATING
ACTIVATION OF NF- κ B

ABSTRACT OF THE DISCLOSURE

Compositions and methods for modulating the activation of nuclear factor κ B (NF- κ B) are provided. The compositions comprise one or more agents that modulate ubiquitination of phosphorylated I κ B α and/or I κ B β . Such compositions may be used for treating diseases associated with NF- κ B activation. Modulating agents include human E3 ubiquitin ligases, antibodies thereto and variants thereof, as well as related proteins.
